

Suggested Preperation Before Project Begins

Choose your site

Site choice is important. Choose a site with as much full sun as possible both Summer and Winter. Shawdows are much longer in the winter so keep this in mind. Determine which way you want your door to face and which way you want it to swing. Try to make your site as flat and smooth as possible. We suggest to prepare your site 2 feet larger than the footprint of your Hoop House choice to allow enough room to remove and replace the side vent panels when needed. If you can't do this yourself we have people that can do it for you at reasonable prices.

Materials needed when your Hoop House is completed

2 bales of straw for every 2'x8' garden box or 4 bales of straw for every 4'x10'garden box in your project. 16 square foot of soil for every 2'x8' garden box or 40 square foot of soil for every 4'x10' garden box.

Choose your accessories

Check the price list on the web site for accessories and choose the ones that work best for your needs however the package deals are substantially discounted and most of the time it will be exactly what you need to grow all the food needed to feed your family year round.

Choose your color
